

LogiMind

AI-Powered Decision Intelligence for SME Logistics

Helping small and medium logistics companies compete with enterprise-level intelligence — at a fraction of the cost.

[TEAM LOGIMIND](#)

[PITCH DECK](#)

The Problem: Decisions on Gut Feel, Not Data

Most SME logistics companies rely on spreadsheets, driver intuition, and static routing. Dispatchers assign trucks based on experience – not real-time demand, weather, or fuel costs.

Higher Costs

Inefficient routing burns fuel and time

Missed Windows

No real-time adjustments to delays

Poor Allocation

Fleet and resources underutilized

Lost Trust

Customers lose confidence in reliability

The Gap No One Is Filling

ENTERPRISE SYSTEMS

Expensive & Complex

Expensive & Complex
Requires Dedicated
IT Team
Long Onboarding

SME REALITY

Manual Spreadsheets
No Real-time Data

Reactive Decisions

LogiMind

Bridging
The Gap

Enterprise tools exist — but they're built for giants

Systems like SAP or Oracle are prohibitively expensive and complex for small operators. Meanwhile, the manual approach leaves SMEs vulnerable to every disruption.

- ❏ **The question we asked:** How can we bring intelligent logistics decision-making to SMEs in a simple, affordable way?

Introducing LogiMind

LogiMind is a **decision intelligence dashboard** that replaces guesswork with AI-driven recommendations — purpose-built for SME logistics operators.

1

Collect Data

Fleet, routes, weather, fuel prices

2

AI Analysis

GLM model evaluates conditions

3

Act Fast

Clear, structured recommendations

How LogiMind Works

LogiMind uses a **hybrid AI architecture** — combining a deterministic routing engine with a GLM AI model for real-world reasoning.

From request to recommendation in seconds — not hours.

Routing Engine

Generates optimized baseline delivery routes

GLM AI Layer

Analyzes weather, fuel prices, and demand signals

Output

Risk alerts, route changes, fleet recommendations

System Architecture

LogiMind's modular design ensures each component can be updated, monitored, and scaled independently – keeping the system reliable and maintainable.

✓ Schema Validation

All inputs are validated before processing

↺ Caching

Reduces API calls and improves speed

🛡️ Fallback Mode

Graceful degradation when APIs fail

The AI Intelligence Layer

LogiMind doesn't just predict – it **reasons**. The GLM model receives structured logistics data and performs real trade-off analysis.

Fleet & Hub Data

Distribution, capacity, and availability signals

External Risk Signals

Weather patterns, fuel price trends, traffic disruptions

Structured JSON Output

Severity levels, recommendations, and logical explanations

MVP Features

AI Route Optimization

Dynamic routing that adapts to real-time conditions

Risk & Weather Alerts

Proactive warnings for storms, congestion, and disruptions

Fleet Allocation

Smart recommendations for vehicle and driver assignments

Decision Dashboard

Clear, visual interface for dispatchers and managers

Reliability Built In

Enterprise-grade stability for SME budgets

LogiMind is designed to stay operational even when external services fail. Our safety systems ensure continuity under real-world conditions.

Monitoring & Logging

Full visibility into system behavior

Priority-Based Error Handling

Critical paths protected first

Emergency Fallback Mode

System degrades gracefully, never crashes

The Road Ahead

LogiMind is more than a tool — it's a platform for SMEs to **compete with enterprise intelligence**. Our roadmap extends that vision.

1

MVP — Now

Route optimization, risk alerts, fleet recommendations, decision dashboard

2

Phase 2

Predictive demand forecasting and driver mobile integration

3

Phase 3

Full fleet automation and enterprise system integrations

✔ **LogiMind transforms raw logistics data into clear, actionable decisions** — improving efficiency, reducing costs, and building customer trust. **We are Team LogiMind.**
